Application/Control Number: 09/678,333 Page 2

Art Unit: 2622

## Examiner's response:

- 1. Applicant argues with regards to claim 1 that Examiner is misconstruing the pausing the generation of carrier as recited by claim 1 as pausing the carrier frequency. The Examiner respectfully disagrees. The word carrier and carrier frequency are used intermittently in literature to denote the carrier wave that is used in analog and digital communications, e.g. in Pine (US Patent # 6,714,260) as stated in col. 2 lines 5-7, the system master clock frequency omega.sub.RF is set at the desired carrier frequency for a radio transmission of the composite video signal. Furthermore Katsuhiro teaches stopping of the output of a clock signal for an oscillation circuit when there is no change in an input signal to an external device or a transmission signal. Therefore clock signal for an oscillation circuit is analogous to a carrier wave used to carry information signals. Pine is used to teach carrier wave.
- 2. Applicant argues that Katsuhiro teaches, when there is no input, the oscillation is stopped which is the exact opposite of the claim language. Claim 1 clearly recites that when input has changed (received input to capture an image), the oscillation is stopped. The Examiner totally disagrees with the applicant. Katsuhiro clearly teaches when the output of a clock signal for an oscillation circuit when there is no change in an input signal to an external device or a transmission line and starting the output of the clock signal when there is any change. Therefore the change as described is when there is no change to an external device or a transmission line and not the change to capture an image.

In the combination of references, Greer teaches stopping the transmission of video when the command to capture an image is received. Katsuhiro then teaches that when there is no change in transmission to an external device (change corresponding to stopping of the Art Unit: 2622

transmission of video), a clock oscillation is stopped in order to save power in communications equipment like a camera, which is a cause of major concern in devices especially digital cameras.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yogesh K. Aggarwal whose telephone number is (571) 272-7360. The examiner can normally be reached on M-F 9:00AM-5:30PM.

- 3. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vivek Srivastava can be reached on (571)-272-7304. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
- 4. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
